

Table 6 Percent not enjoying first post-pubertal coitus for emotionally negative reasons in original Kinsey sample, by 3 basic participant–partner age groupings; analyses done separately by gender

	Males			Females		
	Emotionally negative (%)	<i>N</i>	Pairwise contrasts	Emotionally negative (%)	<i>N</i>	Pairwise contrasts
Minor–peer	13	1,106	A	20	461	A
Minor–adult	22	550	B	17	292	A
Adult–adult	13	2,549	A	17	2,907	A
Total	14	4,205		18	3,660	

Note For males, $\chi^2(2) = 30.12, p \leq .0001$. For females, $\chi^2(2) = 1.78, p = .41$. For each analysis (i.e., within gender), proportions without common letters (in “pairwise contrasts” column) are significantly different in pairwise contrasts (Marascuilo procedure)
